There are two ways to connect/combine panels, with a parallel or a series connection. With a parallel connection, the amperage is combined while keeping the voltage the same. For example, connecting three 100W panels in parallel would result in $6A \times 3 = 18A$ at 17-19V (operating voltage of a 100W panel). A series connection combines the voltage while keeping the amperage the same.
