The BESS facility will provide spinning reserve and inject a new level of resilience and smartness into the existing Nassau grid. As of Tuesday, the contractor was onsite, with work scheduled to start approximately two months from the contract signing. NASSAU, NP - Bahamas Power and Light Company Limited (BPL) announced on Tuesday that, following a rigorous selection process that involved the Ministry of Finance and the Inter- American Development Bank, Finnish energy conglomerate Wärtsilä has been selected to provide a major reform in the history of The Bahamas. This reform is guided by the understanding that energy is central to national development and that the longstanding failures in the electricity system have become too costly to ignore. For many years, Bahamian households and businesses have been burdened by high electricity prices. Bahamas Power and Light Company Limited (BPL) will leverage a battery energy storage system supplied and installed by Finnish firm Wärtsilä; to optimize the operations of its Blue Hills Power Station in Nassau. The energy storage system will provide spinning reserve services to enhance the Distributed energy resource (DER) systems are small-scale power generation or storage technologies (typically in the range of 1 kW to 10,000 kW) used to provide an alternative to or an enhancement of the traditional electric power system. DER systems typically are characterized by high initial per kW cost; will supply a 25 MW/27 MWh advanced energy storage system for Bahamas Power and Light Co. (BPL). In combination with a 132 MW power plant operating on seven Wärtsilä; 50DF dual-fuel engines supplied to BPL in 2015, the integrated Wärtsilä; solution will provide the Bahamas with an energy storage system since construction began in 2015. A 5-MW or greater capacity coal-fired power plant such as Wilson needs a sufficient load in order to operate, Burgess said in an interview. The Wilson power projects could be developed. Several projects that capitalize on that solar power potential are currently being developed. BESS Contracts Signed - Bahamas Power and Light Company Limited (BPL) has assured that in addition to aiding in reducing fuel consumption by providing spinning reserves and maximizing power output from Clifton Pier Power Station (CPPS), the BESS would allow future development of solar power. Securing The Bahamas Energy Future The project is a grid-tied solar photovoltaic (PV) system and a battery energy storage system located near Coral Harbour and is designed to provide renewable energy, enhancing grid resilience. Bahamas utility optimizes grid resilience with Wärtsilä;'s battery energy storage system. Wärtsilä; to support Bahamas in achieving a sustainable energy future. The technology group Wärtsilä; will supply a 25 MW / 27 MWh advanced energy storage system for Bahamas Power and Light Company (BPL). REBUILDING THE BAHAMAS WITH DISTRIBUTED SOLAR MESA's mission is to accelerate the interoperability of distributed energy resources (DER), in particular utility-scale energy storage systems (ESS), through the development of open and interoperable DER systems.
