

Barbados' first energy storage power station

The Barbados Light & Power Company Ltd (BLPC) installed utility-scale energy storage as a component of the 10 MW Solar Photovoltaic (PV) plant in the north of the island at Trent's St. Lucy, Barbados. The Government of Barbados has officially launched a major procurement process for the country's first large-scale Battery Energy Storage Systems (BESS), aimed at transforming the national electricity grid and unlocking delayed renewable energy investments. The launch event, hosted by the Ministry of Energy and Business, is a step closer to launching its first procurement project for Battery Energy Storage Systems to support the grid and unlock stalled Solar PV connections. The Ministry of Energy and Business is currently hosting a three-day Procurement Design Workshop with key stakeholders to discuss and finalize the project. A \$350 million hybrid renewable energy power plant is scheduled to be constructed in Barbados. It will be the largest, most advanced facility in the area, as BioEnergy Times reported. "This project will use solar energy along with hydrogen and battery storage so the power supply is steady day and night." The Government of Barbados has officially launched a major procurement process for the country's first large-scale Battery Energy Storage Systems (BESS), aimed at transforming the national electricity grid and unlocking delayed renewable energy investments. This ambitious project, spearheaded by the Barbados Electric Light & Power Company (BLPC), is a pivotal move towards the island's energy independence through smart technology integration. By balancing economic and environmental factors, Barbados is soon to launch its first project for the installation of Battery Energy Storage System. This will support the electricity grid and will allow the stalled solar photovoltaic (PV) systems to proceed. SINO SOAR Wins the bid for 4.6MWh Hybrid BESS. It is not only the first hybrid BESS project in Barbados but also a pivotal step in the
