

Bifacial double-glass module installation method

What is the general manual for bifacial double glass solar modules? This general manual provides important safety information relating to the installation, maintenance and handling of bifacial double glass solar modules (BiKu and BiHiKu series). Professional installer must read these guidelines carefully and strictly follow these instructions. Where can I find the bifacial module installation manual? Please retain this manual for future reference. We recommend visiting canadiansolar.com regularly for the most updated version of bifacial module installation manual. The information contained in this manual is subject to change by Canadian Solar Inc. without prior notice. Are BiKu and BiHiKu bifacial double glass solar modules safe? Canadian Solar Inc. bifacial double glass solar modules (BiKu and BiHiKu) have been qualified for Application Class A (equivalent to Safety Class II requirements). Modules rated under this class should be used in systems operating at voltage above 50V or power above 240W, where general contact access is anticipated. Are Canadian Solar bifacial double glass modules fire rated? Canadian Solar Inc. bifacial double glass modules have been certified as Type 3 or Type 13 according to UL and as Class A for fire performance according to IEC 61730-2, please refer to the datasheet or the product nameplate for the detailed types. How much deflection should a double glass module have? Modules should be safely fixed to bear all expected loads, including wind and snow loads. After the installation of double glass modules, a 30 mm deflection for framed module is allowed. For framed modules, a minimum clearance of 6.5 mm (0.25 in) between modules is required to allow thermal expansion of the frames and modules. Why do bifacial modules produce more voltage than standard test conditions? Under certain conditions, a module may produce more current or voltage than its Standard Test Conditions rated power. For Bifacial modules particularly, the operating current is related to specific system mounting and design conditions, and will vary under different module mounting height and albedo of ground surface. JA SOLAR PV BIFACIAL DOUBLE-GLASS MODULES Mar 31, 2018; For high wind load and snow load areas, if the tracking bracket installation method is used, it is recommended to use 2.5mm thickness and above 60mm height purlin installation Installation_Manual_of_Bifacial_Module May 11, 2018; This general manual provides important safety information relating to the installation, maintenance and handling of bifacial double glass solar modules (BiKu and Global Installation Guide for Jul 19, 2018; The connectors at the opposite ends of these wires allow easy series connection of Suntech's bifacial double glass modules by firmly inserting the positive connector of a Module PV MODULES INSTALLATION MANUAL This INSTALLATION MANUAL applies to installing, maintaining, and using the double glass and bifacial dual-glass solar modules manufactured by Hounen Solar Cambodia Inc or Hounen Solar.
