

## Energy storage lithium battery stack

A "stacked lithium battery" system refers to individual lithium battery modules - very often utilizing the safe and long-lasting Lithium Iron Phosphate (LiFePO<sub>4</sub> or LFP) chemistry - that are specifically designed to be physically stacked upon one another or arranged in a dedicated rack. You've likely heard the term "stacked lithium battery" and are curious about what it means, how it works, and if it's the right solution for your needs. These modular power units offer a highly customizable approach to building up your energy reserves, especially for solar or backup power.

A stackable battery is an energy storage solution made up of several battery modules arranged in a stack. These modules are linked either in series or parallel to enhance the system's total capacity and voltage. The arrangement of multiple modules also offers built-in redundancy, ensuring the
