A ASEAN Energy Report revealed that Laos could've powered an additional 400,000 homes last year if they'd had proper storage solutions. That's where China's expertise enters the picture. China's invested \$1.2 billion in Laos' energy sector since , focusing on With hydropower supplying over 80% of its electricity [1], Laos faces seasonal energy shortages during dry spells. This paradox of energy poverty amidst renewable abundance creates a perfect testing ground for advanced storage solutions. Recent data shows Laos' electricity demand growing at 9% That's Laos for you - quietly transforming from a hydropower giant to a pioneer in the Laos energy storage industry. With 80% of its electricity already coming from renewables (mostly hydropower), Laos is now betting big on energy storage solutions to juice up its regional influence. But how did The Sembcorp ESS is an integrated system comprising more than 800 large-scale battery units. It uses lithium iron phosphate batteries with high energy density, fast response time and high round-trip efficiency to maximise energy storage, making them suitable for maintaining grid stability.
