What are the different chemistries for lithium ion batteries? There are many different chemistries for Lithium-Ion batteries including LiCoO₂ (cylindrical cell), LiPo, and LiFePO₄ (cylindrical/prismatic cell). Ionic mostly focuses on designing, manufacturing and marketing LiFePO₄ batteries for its starter and deep cycle batteries.

What are LiFePO₄ (Lithium Iron Phosphate) Batteries? What is a lithium ion deep cycle battery? Compared to lead-acid batteries, Lithium-ion batteries are lighter and provide a higher open circuit voltage, which allows for power transfer at lower currents. These batteries have the following characteristics:

Features of ionic Lithium-ion Deep Cycle Batteries:

- Can ionic lithium ion batteries be discharged? Ionic's lithium-ion batteries have 1/3 the internal resistance of a similar capacity lead-acid battery and they can be safely discharged to 90% DOD. Lead-acid internal resistance rises as they are discharged; the actual capacity which can be used may be as little as 20% of the mfg. rating. Discharging in excess will damage the lead-acid battery.
