

## Microgrid applications based on energy storage systems

Energy storage technologies have a wide range of applications in microgrids, including providing backup power and balancing the supply and demand of energy. Different energy storage techniques have been discussed, including batteries, flywheels, supercapacitors, pumped hydro energy storage, and Multinational energy management company Schneider Electric, has introduced a new range of Battery Energy Storage Systems (BESS) designed specifically for microgrids. Available in two enclosure sizes, these BESS offerings come with various storage and discharge configurations, catering to the Battery energy storage systems (BESS), an always-on energy source, can contribute to day-to-day supply, improve operational resiliency, and deliver sustainability benefits. As a result, they are far more appealing to a range of buyers, including enterprise and multi-tenant data center owners.
