Are portable power stations a good idea? Portable power stations can power and charge electronic devices off the grid. They don't burn fossil fuels, so they're cleaner, quieter, and require minimal maintenance compared with gas- and diesel-powered generators. They can be recharged using solar panels and home electrical outlets. What are the disadvantages of portable power stations? Do all power stations provide a power source? While all power stations are intended to provide a power source, each model differs in their overall design and included features. Some models have an intuitive mobile app to fully control your power station wirelessly. Others may offer expandable battery capacity, and some are advertised as being used as an uninterruptible power supply. Is a power station a good choice for hiking? Yes, it's very niche in terms of form factor, but if you're hiking, it's hard to beat a backpack-based setup since you'll likely be carrying one anyway. The power station itself has a 700-watt AC output, two USB-C and two USB-A charging ports, and it can charge up to five devices simultaneously. Which power station should I buy? The Jackery Plus is the best power station for those who need ample power. While it is pricey at over \$2,000 list price, it has plenty of power, charges impressively fast, and won't let you down in case of an emergency. If your main need is charging devices like phones and laptops, our favorite is the Anker 521. Are power stations a good investment for camping? Power stations are a significant investment, but they can ultimately upgrade your camping experience to allow for power off-grid. Before making our top picks, we considered several factors.
