Find low everyday prices and buy online for delivery or in-store pick-up. When do you use 'self' in Python? Are you supposed to use self when referencing a member function in Python (within the same module)? More generally, I was wondering when it is required to use self, not Mockito is currently self-attaching to enable the inline-mock-maker I get this warning while testing in Spring Boot: Mockito is currently self-attaching to enable the inline-mock-maker. This will no longer work in future releases of the JDK. Please What is the purpose of the `self` parameter? Why is it needed? For a language-agnostic consideration of the design decision, see What is the advantage of having this/self pointer mandatory explicit?. To close debugging questions where OP omitted a Why do I get "TypeError: Missing 1 required positional argument: Another possibility in the neighborhood of this answer is if you declare a method as an @staticmethod and then include (or retain) self as the first positional argument How to bypass certificate errors using Microsoft EdgeTo allow a self-signed certificate to be used by Microsoft-Edge it is necessary to use the "certmgr.msc" tool from the command line to import the certificate as a Trusted Certificate Difference between Python self and Java this Moving further: Technically both self and this are used for the same thing. They are used to access the variable associated with the current instance. Only difference is, you have What is SELF JOIN and when would you use it? [duplicate] You use a self join when a table references data in itself. E.g., an Employee table may have a SupervisorID column that points to the employee that is the boss of the current How to get Python requests to trust a self signed SSL certificate? In my case, I was using self-signed certificate generated by mkcert. While curl works fine with such self-signed certificates, the Python requests module does not. git The reason was an SSL certificate problem: 'self-signed certificate in
