

Serbia's EPS Explores Hydrogen for Energy Transition The energy transition and decarbonisation are not merely pertinent to the energy sector but extend to the entire economy and society. Elektroprivreda Srbije is well-positioned Serbia implementing first green hydrogen pilot project Serbia is conducting its first pilot project for hydrogen, HyDSerbia, in cooperation with Germany-based firm Leipziger Energiegesellschaft. Serbia: EPS explores hydrogen integration for energy transition Serbia's state-owned power utility, EPS, has launched an assessment to explore the feasibility of integrating hydrogen production and storage within its energy infrastructure. Assessing green hydrogen potential and utilization The paper provides a comprehensive examination of resources available for the deployment of green hydrogen in Serbia. The assessment encompasses various aspects, including renewable energy potentials, technological Hydrogen Economy: A Path to decarbonisation The conference brought together representatives of the Serbian Government, experts, industry leaders, and innovative companies to discuss the future of hydrogen projects as sustainable solutions for Hydrogen refueling station: Overview of the technological status The present paper investigated the state of the art and the current development of hydrogen-based infrastructures, with a particular focus on hydrogen refueling stations, to Serbia's EPS mulls adding hydrogen to production EPS has launched an analysis to determine whether the usage of hydrogen production and storage facilities and fuels based on hydrogen would be a viable option to expand its capacities, Zivkovic said One-Stop-Shop The aim is to construct a pilot plant, consisting of a PV generation and hydrogen production component, initially for the purpose of small-scale industrial production and the practical Serbia's EPS examining green hydrogen production State-owned Elektroprivreda Srbije (EPS) is analyzing options for the production and use of green hydrogen, including as an alternative fuel for coal-fired power plants, Serbia's EPS Explores Hydrogen for Energy Transition The energy transition and decarbonisation are not merely pertinent to the energy sector but extend to the entire economy and society. Elektroprivreda Srbije is well-positioned Serbia implementing first green hydrogen pilot project with Germany Serbia is conducting its first pilot project for hydrogen, HyDSerbia, in cooperation with Germany-based firm Leipziger Energiegesellschaft. Assessing green hydrogen potential and utilization for sustainable The paper provides a comprehensive examination of resources available for the deployment of green hydrogen in Serbia.
