AC electricity is the form of electricity we use at home and office while DC electricity is the type of electricity produced by batteries and solar panels. What is a power inverter? A power inverter converts DC (direct current) from a battery into AC (alternating current) used by household appliances. Think of it as a bridge between your power source and the devices you need to run. A good inverter ensures durability, efficiency, and compatibility. How a DC inverter works? AC power will always constantly reverse direction, normally at the frequency of 50 Hz or 60 Hz. By using the inverters, you can control the flow of DC electricity and make it mimic the AC. They apply the high-speed switching electronic devices to rapidly reverse the direction of the DC power source by turning it on and off. What is a 2000W power inverter?
