What is energy in Uruguay? Energy in Uruguay describes energy and electricity production, consumption and import in Uruguay. As part of climate mitigation measures and an energy transformation, Uruguay has converted over 98% of its electrical grid to sustainable energy sources (primarily solar, wind, and hydro). Did Uruguay build a power grid? Uruguay did what most nations still call impossible: it built a power grid that runs almost entirely on renewables--at half the cost of fossil fuels. The physicist who led that transformation says the same playbook could work anywhere--if governments have the courage to change the rules. How much electricity does Uruguay produce? The results speak for themselves. Today, Uruguay produces nearly 99% of its electricity from renewable sources, with only a small fraction--roughly 1%-3%--coming from flexible thermal plants, such as those powered by natural gas. They are used only when hydroelectric power cannot fully cover periods when wind and solar energy are low. Is Uruguay a net importer of energy? Once a net importer of energy, Uruguay now exports its surplus energy to neighbouring Brazil and Argentina. In less than two decades, Uruguay broke free of its dependence on oil imports and carbon emitting power generation, transitioning to renewable energy that is owned by the state but with infrastructure paid for by private investment. Are photovoltaic solar power plants legal in Uruguay? A number of photovoltaic solar power plants have been built. The use of nuclear energy in Uruguay is prohibited by law 16.832 of . What can we learn from Uruguay's transition? What Can We Learn From Uruguay's Transition? Energy sovereignty is the right and the ability for communities to control and develop their energy systems in the way they decide, un beholden to private interests or external pressures that would undermine that right.
