

solar inverter charging control

If an inverter is to be used as part of a solar system with batteries, then an additional component called a charge controller will be part of the inverter. A charge controller is a device that regulates voltage and/or current to keep the batteries from overcharging. Solar controller inverter effectively transitions power from your solar panels to your batteries and, then, to your household appliances. The charge controller with inverter regulates electricity during different stages so that all parts are protected and, at the same time, the energy that's being optimally used.
