Our solar system currently consists of the Sun, eight planets, five dwarf planets, some 430 known moons, and a host of smaller objects. The planets can be divided into two groups: the inner terrestrial planets and the outer giant planets. The eight planets can be divided into two distinct categories on the basis of their densities (mass per unit volume). The four inner, or terrestrial, planets--Mercury, Venus, Earth, and Mars--have rocky compositions and densities greater than 3 grams per cubic cm. (Water has a density of 1 gram per Our solar system currently consists of the Sun, eight planets, five dwarf planets, some 430 known moons, and a host of smaller objects. The planets can be divided into two groups: the inner terrestrial planets and the outer giant planets. Pluto, Eris, Haumea, and Makemake do not fit into either The solar system came into being about 4.5 billion years ago when a cloud of interstellar gas and dust collapsed, resulting in a solar nebula, a swirling disc of material that collided to form the solar system. The solar system is located in the Milky Way's Orion star cluster. Only 15% of stars in The solar system 1 consists of the Sun and many smaller objects: the planets, their moons and rings, and such "debris" as asteroids, comets, and dust. Decades of observation and spacecraft exploration have revealed that most of these objects formed together with the Sun about 4.5 billion years ago. The atmospheres of Venus, Earth, and Mars are composed of a significant percentage of oxidized compounds such as carbon dioxide. Among the inner planets, only Earth has a strong The four giant outer planets are much more massive than the terrestrial planets and have immeMost of the known moons move around their respective planets in the same direction that the planets orbit the Sun. They are extremely diverse, representing a wide range of environments. The Solar System - British Astronomical Association Our Solar system can conveniently, be divided, into two halves, which are named. The Inner Solar System, is made up of the Sun, Mercury, Venus, Earth, Mars and finally the Asteroid belt. What does the Solar System consist of? Together the Sun, the eight planets, the moons, asteroids and comets make up our Solar System. Key point The main features of our Solar System are: The Sun. The eight planets. Moons
